

Scalability & Future Plan

Date	29 September 2026
Team ID	SWTID-2026-4005
Project Name	PocketSmart AI
Maximum Marks	1 Mark

Current System Limitations

S.No	Limitation	Impact	Priority to Address
1	Default SQLite deployment	Less suitable for high-concurrency production workloads	High
2	In-memory rate limiter	Limits do not persist across multiple application instances	Medium
3	External AI dependency	AI features depend on API credentials, network and quota	Medium

Scalability Plan

Aspect	Current State	Proposed Upgrade / Solution
User Load	Single Flask deployment	Deploy behind a production WSGI server and load balancer
Data Storage	SQLite fallback / optional PostgreSQL	Use managed PostgreSQL with indexes and backups
Performance	Synchronous Flask routes + browser fetches	Caching, background jobs and optimized queries
Security	Basic application security controls	Central secret management, HTTPS, monitoring and stronger production auth

Future Roadmap

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 2	Bank/UPI integration and recurring expenses	Future release	Less manual entry
Phase 3	Advanced spending prediction and alerts	Future release	Earlier intervention
Phase 4	Mobile/PWA, multilingual support and cloud deployment	Future release	Broader accessibility and scale
